Hard bedmas questions grade 7

Four hard order of operations problems to tease your brain and blame your math teacher The first two were were found online and I made up the last two. Problem #1: 6 ÷2(1 + 2)This problem was on Facebook and many people got it wrong. According to PEMDAS, The first thing to do is parenthesis.6 ÷2(1 + 2) = 6 ÷2(3)Now this is where many people got it wrong. They try to follow PEMDAS by multiplying 2 and 3 to get 6. The problem became 6 ÷ 6 and 6 ÷ 6 = 1Because the M comes before D, it makes people feel that they have to multiply first.MD in PEMDAS means to multiply and / or divide from left to right and it does not matter if multiplication is first or not.The correct way to do it then is to divide 6 by 2 first.6 ÷2(3) = 3(3) = 9. Problem #2: Apparently, many people got it wrong in Japan. What makes this problem hard and tricky? Or is it really?We need two concepts to solve this problem. First, according to PEMDAS, do division. Then, you need to know of course how to do this division.3 ÷ 1/3 = 3 × 3/1 = 9After that, everything is easy9 - 9 + 1 = 0 + 1 = 1 Very hard order of operations problems Problem #3:10 × 4 - 2 × (4² ÷ 4) ÷ 2 ÷ 1/2 + 9= 10 × 4 - 2 × (16 ÷ 4) ÷ 2 ÷ 1/2 + 9= 10 × 4 - 2 × (4) ÷ 2 ÷ 1/2 + 9= 10 × 4 - 8 ÷ 2 ÷ 1/2 + 9= 10 × 4 - 4 ÷ 1/2 + 9 =10 × 4 - 8 + 9= 40 - 8 + 9= 32 + 9= 41Problem #4:-10 ÷ (20 ÷ 2² × 5 ÷ 5) × 8 - 2 -10 ÷ (20 ÷ 2² × 5 ÷ 5) × 8 - 2 First stay inside the parenthesis until you get a single number-10 ÷ (20 ÷ 4 × 5 ÷ 5) × 8 - 2-10 ÷ (5 × 5 ÷ 5) × 8 - 2 (20 ÷ 4 = 5) -10 ÷ (25 ÷ 5) × 8 - 2 (5 × 5 = 25)Now again, resist the urge to do multiplication first and remember that a negative divided by a positive is a negative.-10 ÷ (5) × 8 - 2 -2 × 8 - 2-16 - 2-18 Order of operationsHard order of operations problems Jun 09, 21 01:35 PMStatistics made easy - We will provide you with a solid introduction to statistics along with concise and easy to follow lessons Read More The printable order of operations worksheets below will get you mastering your PEMDAS skills in no time! They start with simple problems that deal only with the order of operations problems related to the basic addition, subtraction, multiplication and division rules, but later worksheets deal with order of operations involving all of the PEMDAS rules. If you work through these worksheets, your students will have complete mastery of order of operations and be ready for harder algebra equations where order of operations mastery is a necessity! Order of Operations (PEMDAS)The order of operations are set of conventions used in math to decide what order operations need to be evaluated in to consistently get to the answer to a problem. These are also called precedence rules, and the occur in math problems as well as computer programming languages. Students make errors related to order of operations because we train them to read left-to-right, and a natural tendency is simply to evaluate a math program the same way. Left-to-right processing of a mathematical expression is the short road to whatever you get when you divide by zero. Just call it bad.Instead, check with dear Aunt Sally. PEMDAS is a mnemonic tool used to help remember what operations to perform in what order. PEMDAS stands for Parentheses, Exponents, Multiplication, Division, Addition, Subtraction. We can remember this ordering with the phrase, 'Please excuse my dear Aunt Sally.' By remembering this phrase, we know the order to evaluate terms in an expression. Anything inside parentheses is always evaluated first, even if it contains operations that are of lower precendence. Always work from the 'inside out' when dealing with expressions that have parentheses. Within a set of parathenses, the same rules for order of operations apply, so look for other parenthees and similarlly follow all the other rules below.Next, consider any terms that have exponents. The exponent is something that you might consider strongly attached to a term in an expression, much like a sign on a number. Following this, consider any multiplication or division operations. These operations are of equal precedence, so they can be evaluated in any order themselves. The same is true of the next set of operations, addition and subtraction. They can be evaluated in any order as long as you've done all of the preceding operations completely. Order of operations problems are typically introduced around 5th grade or 6th grade, epending on student ability. Practice with these PEMDAS worksheets will help kids prepare for algebra and other more complex math subjects that come along with middle school grades.The order of operations worksheets in this section provide plenty of practice, and they gradually introduce each step in the PEMDAS mnemonic. If you work your way through all of them, you'll be an order of operations expert in no time. Aunt Sally would be proud. Find here an unlimited supply of worksheets for the order of operations for grades 2-9 that use addition, subtraction, multiplication, division, exponents, and/or parentheses. The worksheets are available both in PDF and html formats (html is editable) and can be customized in multitudes of ways. Basic instructions for the worksheets Each worksheet is randomly generated and thus unique. The answer key is automatically generated and is placed on the second page of the file. You can generate the worksheets either in html or PDF format — both are easy to print. To get the PDF worksheet, simply push the button titled "Create PDF" or "Make PDF worksheet". To get the worksheet in html format, push the button "View in browser" or "Make html worksheet". This has the advantage that you can save the worksheet directly from your browser (choose File → Save) and then edit it in Word or other word processing program. Sometimes the generated worksheet is not exactly what you want. Just try again! To get a different worksheet using the same options: PDF format: come back to this page and push the button again. Html format: simply refresh the worksheet page in your browser window. The worksheets below are already configured for you — just click on the links. They are randomly generated, so you will get a new one each time you click the links. Addition & subtraction only, numbers within 0-10, no parenthesis(grades 1-2) View in browser Create PDF Addition and subtraction only, within 0-30, including parenthesis(grades 2-3) View in browser Create PDF The basic operations, no parenthesis, using four numbers (grades 3-4) View in browser Create PDF The basic operations, with parenthesis (grades 4-5) View in browser Create PDF All five operations, no parenthesis (grade 6) View in browser Create PDF Two or three operations, uses the fraction line, no negative numbers & no exponents (grade 6) View in browser Create PDF Two or three operations, no negative numbers, includes exponents (grades 6-7) View in browser Create PDF Two, tree, or four operations, no negative numbers, includes exponents (grades 6-7) View in browser Create PDF Two operations, uses the fraction line & fractions, uses negative numbers & no exponents (grades 7-8) View in browser Create PDF Two or three operations, uses the fraction line & fractions, uses negative numbers & no exponents (grades 7-9) View in browser Create PDF Two or three operations, negative numbers, exponents (grades 7-9) View in browser Create PDF Challenge: three or four operations, negative numbers, exponents (grades 7-9) View in browser Create PDF See also Math Safe A fun logical thinking game where you need to use the four given single-digit numbers and any of the four operations to reach the target number, and then the safe opens! It practices the usage of all four operations and also the order of operations. The game suits best grades 4 and onward. Choose Math Operation Game Choose the mathematical operation(s) so that the number sentence is true. Practice the role of zero and one in basic operations or operations with negative numbers. Helps develop number sense and logical thinking. Order of operations: lesson for third grade A free lesson for grade 3 about the order of operations. For this grade level, the lesson only deals with addition, subtraction, and multiplication. Generators Below you'll find TWO worksheet generators for the order of operations. The first one works best approximately for grades 1-5, and the second one for grades 5-9. Both let you customize the worksheets, in different ways. The first generator (grades 2-5) lets you choose from five different operations to include (the four basic operations plus exponents), choose to include parentheses or not, and choose the basic number ranges used in the different operations. You can use decimals or whole numbers. This generator uses the symbol × for multipliciation and ÷ for division, as is customary in elementary grades. You can also control the workspace below problems, font size, and the border around each problem. Unfortunately, the first generator does not work correctly if you include both exponents and parenthesis. Sorry about that! However, I feel it is STILL very useful for what it does do. The second generator (grades 6-9) includes by default all four operations and parenthesis. You can choose to include exponents or not. The second one uses a raised dot (·) for multiplication (as is customary in algebra). It uses a fraction line for division, and thus involves fractions. Again, you can include decimals or not, control the number of problems, workspace below the problems, font size, and whether there is a border around the problems.
